The SOC with Driven

This SOC is built to enhance your overall security posture - supporting strong network performance, maximizing staff productivity, and ensuring continuous uptime. By reducing risk and maintaining operational resilience, it helps keep your business secure and running smoothly.

How it Works

1. **Assess** all business-related assets, appliances, security technologies, operating systems, and scope of protection.
2. **Remediate** potentially malicious activities and generate incident notifications.
3. **Monitor** all incidents to include the root cause, impact, and remediation steps.
4. **Operate** and stop any perceived or real attacks through monitoring and hardening of the client's environment.
5. **Regulate** by automating anything deemed repetitive by an Analyst, Engineer, or the alerts feeding by the SOAR platform.

Why?

Faster Results
Deploy quickly and transition to proactive security operations in a matter of weeks.

Security Expertise
Tap into world-class incident response capabilities with our strategic partner.

Optimize Detection & Response
Improve MTTD and MTTR with guaranteed SLAs under 60 minutes, 24/7.

SOC Provides Visibility, ML Analytics, and End-to-End Automation
