

## Relentless Threat Hunting

### What is it?

Threat Hunting is a hands-on, proactive service that looks for attackers who may already be inside your systems. Instead of waiting for alerts, we actively search for signs of hidden threats. By combining smart AI tools with expert human analysis, we find what traditional security tools often miss, helping you improve your defenses and respond faster to future threats.

### Why?

Find hidden, active, or dormant malicious actors operating under the radar.

Combine advanced detection algorithms with analyst expertise to detect subtle anomalies.

Refine existing detection rules by analyzing live threat patterns and behaviors.

Recommendations align threat findings with architectural weaknesses.

### What to Expect

Our team will work alongside your security staff to identify threats, analyze behaviors, and surface unseen risks in your infrastructure. Through data collection, correlation, and pattern deviation analysis, we'll deliver a comprehensive threat report with:

- ✓ **Active Threat Indicators**
- ✓ **Behavioral Anomalies**
- ✓ **Prioritized vulnerabilities**
- ✓ **Architectural improvement guidance**

### PMSquare's Approach

Threat Hunt  
Planning

Data Collection  
& Analysis

Threat  
Investigation

Findings &  
Recommendation

### How to Get Started

**Initiate:** Book a threat ideation session with our consultants

**Prepare:** Complete a scoping form to tailor the hunt to your environment

**Collaborate:** Engage in a real-time analysis session with our cyber experts

**Act:** Receive a prioritized threat report with tactical recommendations

**You Ask, We Deliver**
